Lab experiment-17

Experiment 17. Prolog Program for a Database with Name and DOB

Aim

To write a Prolog program to store and retrieve Name and Date of Birth (DOB).

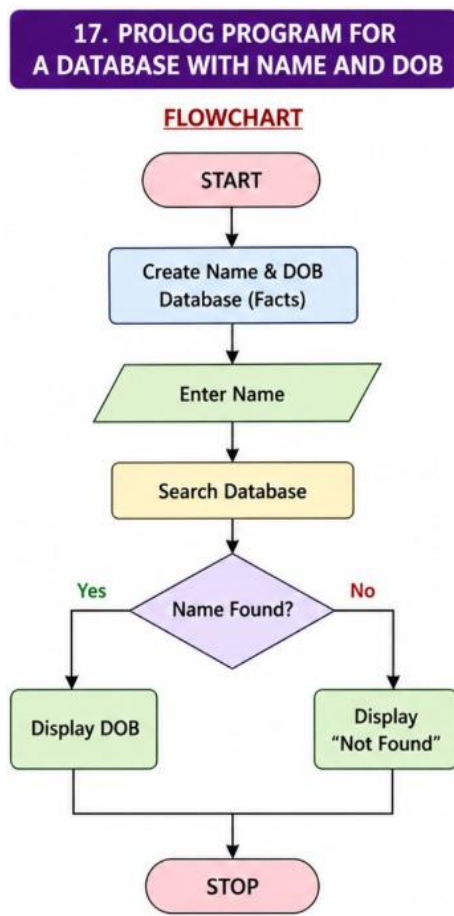

Objectives

- To understand facts in Prolog.
- To create a simple database.
- To retrieve information using queries.

Algorithm

1. Create facts containing name and DOB.
2. Define a rule to find the DOB.
3. Enter a person's name.
4. Search the database.
5. Display the DOB.

Flowchart

Code

```
person(rahul, '10-05-2003').
```

```
person(priya, '15-08-2004').
```

```
person(anu, '20-01-2003').
```

```
find_dob(Name, DOB) :-
```

```
    person(Name, DOB).
```

main :-

Name = priya,

find_dob(Name, DOB),

write('Name: '),

write(Name), nl,

write('DOB: '),

write(DOB), nl.

:- initialization(main).

Output

```

1  person(rahul, '10-05-2003').
2  person(priya, '15-08-2004').
3  person(anu, '20-01-2003').
4
5  find_dob(Name, DOB) :-
6      person(Name, DOB).
7
8      main :-
9          Name = priya,
10         find_dob(Name, DOB),
11         write('Name: '), write(Name), nl,
12         write('DOB: '), write(DOB), nl.
13
14 :- initialization(main).
```

I/O AI Agent

STDIN

Output:
Name: priya
DOB: 15-08-2004

Result

Name= 'priya'

DOB = '15-08-2004'.

Conclusion

Thus, the Prolog database for Name and DOB was successfully implemented.
